### Spring

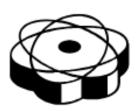

엔터프라이즈용 Java 애플리케이션 개발을 편하게 할 수 있게 해주는 오픈소스 경량급 애플리케이션 프레임워크

#### 다양한...

#### **Microservices**

Quickly deliver production-grade features with independently evolvable microservices.

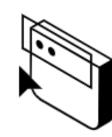

#### Reactive

Spring's asynchronous, nonblocking architecture means you can get more from your computing resources.

#### Cloud

Your code, any cloud—
we've got you covered.
Connect and scale your
services, whatever your
platform.

#### Web apps

Frameworks for fast, secure, and responsive web applications connected to any data store.

#### **Serverless**

The ultimate flexibility.

Scale up on demand

and scale to zero when

there's no demand.

#### **Event Driven**

Integrate with your enterprise. React to business events. Act on your streaming data in realtime.

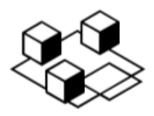

#### Batch

Automated tasks.

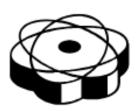

Offline processing of data at a time to suit you.

### Batch

### Batch

#### 배치 애플리케이션

작업을 일괄 처리하는 애플리케이션

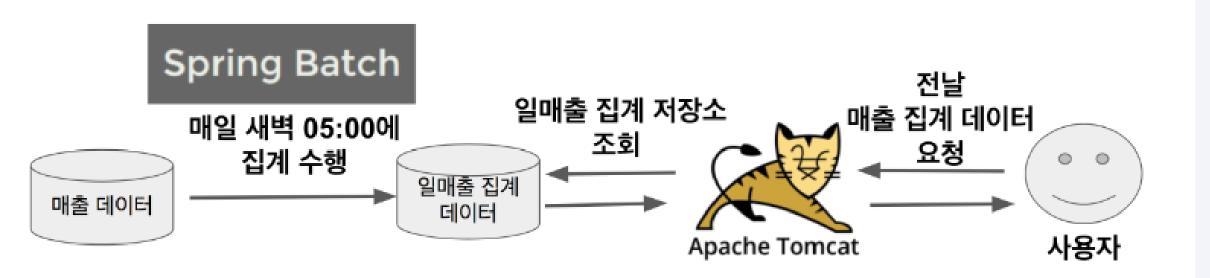

\*외부 상호 작용이나 중단을 필요로 하지 않는 방식으로 유한한 양의 데이터를 처리하는 것

### JobLauncher: Job을 실행하는 인터페이스

```
public interface JobLauncher {
  public JobExecution run(Job job, JobParameters jobParameters)
      throws JobExecutionAlreadyRunningException, JobRestartException,
      JobInstanceAlreadyCompleteException, JobParametersInvalidException;
}

Job Scheduling : 특정 시간에 Job을 자동으로 실행

## Batch는 스케쥴링 프레임워크 x 절대적 목적은 대용량 처리!

스케쥴링은도와줄뿐

# 대용량일괄처리엔 배치 프로그램 기억하기!
